32	80	96	80	64	53½	48

Width of section, 4½ inches.

All radiators are regularly tapped 1½ inches right-hand and bushed according to tapping list.

When top tapping is required it can be furnished 1½ inches and bushed, or tapped solid any size smaller than 1½ inches.

Distance from floor to center of supply or return tapping for water is 4½ inches; steam single-pipe, 4½ inches; steam double-pipe, supply, 4½ inches; return, 4½ inches. Air-vent tapplings are regularly made ½ inch. Add ½ inch for each bushing or plug to get total length measurement of radiator.

For tapping list and "roughing-in" measurements see pages 20 and 21.

For Steam or Water

Width of section, 7 1/2 inches.

All radiators are regularly tapped 2 inches right-hand and bushed according to tapping list.

When top tapping is required it can be furnished 1 1/2 inches and bushed, or tapped solid any size smaller than 1 1/2 inches.

Distance from floor to center of supply or return tapping for water is 4 1/2 inches; steam single-pipe, 4 1/2 inches; steam double-pipe, supply, 4 1/2 inches; return, 4 1/2 inches. Air-vent tappings are regularly made 1/8 inch. Add 1/2 inch for each bushing or plug to get total length measurement of radiator.

For tapping list and "roughing-in" measurements see pages 20 and 21.

32	96	160	138 $\frac{2}{3}$	120	96	96

Width of loop, 12 $\frac{1}{4}$ inches at top, at middle 12 inches; width across feet, 13 inches.

Distance from floor to center of tapping, 3 $\frac{5}{8}$ inches; on 13-inch height this distance is 2 $\frac{5}{8}$ inches.

All radiators will be tapped 2 inches and bushed according to the list, unless the solid tapping is expressly ordered. When top tapping is desired it can be furnished tapped 2 inches and bushed or tapped solid to order from factory.

All openings will be right-hand threaded, unless otherwise ordered. Air-valve tappings are regularly made $\frac{1}{8}$ inch. Add $\frac{1}{2}$ inch for each bushing to get total length measurement of radiator.

For tapping list and "roughing-in" measurements see pages 20 and 21.

Kewanee Box Base

**Box Base for Kewanee Radiators for Either
Bottom or Back Inlet. (A or B)**

To change the box base from a back inlet to a bottom inlet, remove bolt "B" at each end of the box. Take off bottom plate and put in position at the back, putting bolts into bolt holes "A" at each end. This will furnish a bottom inlet instead of a back inlet.

The box base is arranged with a sliding damper. By simply pressing down the knob shown at the top of the fretwork in the illustration, the fresh air inlet is closed off and the air from the room is circulated through the radiator. By raising the knob to the position shown in the cut, the air from the room is shut off and the fresh air inlet is opened, admitting a liberal quantity of fresh air, which must pass through the radiator before being delivered into the rooms.

The wall box is made to fit the openings in the walls through which the fresh air is brought to Direct-Indirect Radiators. Metal pipes, the thickness of the wall, connect the wall box with the box base. These wall boxes are substantially made in one size only, equipped with racks to hold them in place in the wall. They are insect and vermin proof.

**Wall Box for Direct-Indirect Radiators. Opening Screened
with Heavy, Close-Meshed Brass Wire Cloth**

KEWANEE

Direct-Indirect Radiator

The Kewanee Box Base is arranged to fit the Three-Column Steam or Water Radiators.

Measurements of Box Base

Distance from floor to top of base, 15 inches.
Outside measurements of opening for fresh air inlet:

3 sec.	$2\frac{3}{4} \times 3\frac{5}{16}$ in.	8 sec.	$15\frac{1}{4} \times 3\frac{5}{16}$ in.
4 sec.	$5\frac{1}{4} \times 3\frac{5}{16}$ in.	9 sec.	$17\frac{3}{4} \times 3\frac{5}{16}$ in.
5 sec.	$7\frac{3}{4} \times 3\frac{5}{16}$ in.	10 sec.	$20\frac{1}{4} \times 3\frac{5}{16}$ in.
6 sec.	$10\frac{1}{4} \times 3\frac{5}{16}$ in.	11 sec.	$22\frac{3}{4} \times 3\frac{5}{16}$ in.
7 sec.	$12\frac{3}{4} \times 3\frac{5}{16}$ in.	12 sec.	$25\frac{1}{4} \times 3\frac{5}{16}$ in.

KEWANEE

Pin Indirect Radiator

*Made in Two Sizes
for
Steam and Water*

*Sections Contain 10
and 15 Square Feet
of Heating Surface*

Table of Dimensions

Surface in Section	Length of Section	Height of Section	Height of Section at Connecting Point	Width of Section in Stack
10 sq. ft.	36 in.	$7\frac{3}{8}$ in.	$9\frac{3}{4}$ in.	$2\frac{7}{8}$ in.
15 sq. ft.	36 in.	$11\frac{1}{2}$ in.	$12\frac{3}{4}$ in.	$2\frac{7}{8}$ in.

Air-valve tappings are regularly made $\frac{1}{8}$ inch.

All screwed openings will be right-hand threaded unless otherwise ordered, tapped 2 inches and bushed to proper size, according to size of radiator.

The sections are connected by extra heavy malleable iron slip nipples slightly tapered from center, fitting snugly into sockets of the same taper drawn together by short bolts, making an absolutely tight connection.

For convenience in handling, Indirect Radiators will be shipped loose, unless expressly ordered assembled into stacks. Customers should, when ordering, be particular to specify the number of stacks into which the sections are to be assembled, so that necessary vent sections and nipples may be shipped.

For tapping list see page 20.

KEWANEE *Wall Radiator Figures*

Key to figure numbering. The first numeral in each of the following figures indicates the size of section. Figure 717 refers to 7-foot sections arranged in the manner as shown in sketch above the number, and Figure 917 refers to 9-foot sections and to the same assemblage.

Fig. 713 or 913
Two Sections in Two
Tiers—Water and
2-Pipe Steam

Figure 717 or 917

—One- and Two-Pipe Steam

Figure 740 or 940
Assembled in Eight Sections in Two Tiers—For Two-Pipe Steam

Kewanee Wall Radiator Figures

Above measurements apply to either "A" or "B" styles

NOTE—The regular tappings of Wall Radiators are indicated by Nos. 2, 3, 4, 5, 6, 7, 8 and 9. Nos. 20, 30, 40, 50, 60, 70, 80 and 90 indicate special tappings which can be furnished if desired and for which an extra charge will be made. Tappings are 1 1/2 inches, supply and return, and bushed as desired. Add 1 1/8 inches to length measurement for each hexagonal nipple used in assembling.

For convenience in shipping, unless special instructions to the contrary are received, wall radiators are assembled in stacks not exceeding 7 sections.

Wall radiators are tapped 1 1/2 inches flow, 1 1/2 inches return, and bushed to size required. Wall radiators are assembled with malleable iron screw nipples threaded right and left.

Kewanee Radiator Brackets

The brackets illustrated are inexpensive and are commonly used. Style D is a concealed bracket for Column Radiators. See page 19 for Kewanee Adjustable Radiator Brackets which we recommend for permanent installations.

Kewanee Adjustable Radiator Bracket

The Kewanee Adjustable Radiator Bracket is made in various lengths to support any Kewanee Wall or Column Radiator of any height.

They are easily attached to concrete, brick, tile, or frame walls and can be adjusted from $\frac{1}{16}$ of an inch to $1\frac{1}{2}$ inches *after the bracket is on the wall*. The horizontal adjustment is made automatically by expansion or contraction up to 3 inches.

They require no wood strips or backing—and clear the baseboard and window sill.

With radiator installed the brackets are hidden.

They hold the radiator out from the wall to allow for any valve or heat-regulating device.

Can be put up with less trouble and lined up for long radiators in less time and more accurately than any other bracket yet devised.

"Roughing In" Measurements

Height Radiator	No. Columns	Dimension A
For 5' Wall		5 $\frac{1}{4}$ "
22"	3 and 4	5 $\frac{1}{4}$ "
26"	2, 3, and 4	8 $\frac{1}{8}$ "
For 7' and 9' Wall		12 $\frac{1}{2}$ "
32" and 38"	1, 2, 3, and 4	12 $\frac{1}{2}$ "
45"	2, 3, and 4	24"

Dimension B is the distance from center of lower wall bolt hole to bottom of radiator and is adjustable from $6\frac{1}{4}$ inches to $7\frac{3}{4}$ inches on all brackets.

Tapping Instructions

The tapping of Indirect Radiators, in so far as is stated in their description, is also made according to this list.

SYSTEM	Square Feet of Radiation	Size of Tapping
ONE-PIPE STEAM	24 square feet and under	1 inch
	Above 24 but not exceeding 60 feet	1¼ inches
	Above 60 but not exceeding 100 feet	1½ inches
	Above 100 square feet	2 inches
TWO-PIPE STEAM	48 square feet and under	1 x ¾ inch
	Above 48 but not exceeding 96 feet	1¼x1 inch
	Above 96 square feet	1½x1¼ inches
HOT WATER	Radiators containing 40 square feet and under	1 inch
	Above 40 but not exceeding 72 feet	1¼ inches
	Above 72 square feet	1½ inches

Directions for Ordering

You can assist us very materially in handling your order by following as closely as possible the directions here given:

1. Write legibly, and, if convenient, order on typewritten sheet.
2. Give the exact name of the radiator as it appears in this catalog.
3. Be particular about giving clearly the number of radiators and the number of sections in each radiator.
4. Give the heights wanted, and state whether for steam or water heating.
5. State, if for steam, whether for one- or two-pipe work.
6. When leg sections are ordered, give name of the radiator, the tapping desired, whether for supply or return connection, and whether for one- or two-pipe steam or for hot water.
7. In case radiators for hot water are ordered tapped top and bottom, state whether the tapping should be at opposite or the same ends.
8. Special patterns, shapes, and tapings frequently cause delay; it is wise, therefore, to use standard patterns, shapes, and tapings if possible.

"Roughing-In"

Measurements of Radiators

Radiator	Height	A	B	C	D
		Floor to center of lower tapping, straight hub, for hot water and supply on two-pipe steam.	Floor to center of lower tapping, drop-hub one-pipe steam or return on two-pipe steam.	Floor to center of upper tapping.	Center to center of straight-hub hot water

KEWANEE *Extra Heavy Malleable Nipples*

For Radiator Joints

"Extra Heavy" Push Nipples

We want to call particular attention to our extra heavy malleable iron push-nipple for connecting the radiator sections. There seems to have been a certain prejudice among some against the push-nipple radiator. This was undoubtedly caused by the use of the thin-spun steel nipple which only lasted for a short time before rusting out, or by the first attempts at using malleable iron, which were not properly made.

When we first commenced to make radiators we gave the nipple question careful consideration. We were convinced that the push-nipple connection was the only proper one for radiators, and after several trials decided on the malleable iron, of a certain mixture.

This nipple is mechanically and chemically perfect. Water absolutely cannot get through the joints which it fits. The machinery for tapering and finishing this nipple is of our own design.

The straight iron-to-iron joint with this perfect nipple is unquestionably a firmer and more lasting joint than can ever be expected of a right-and-left screwed joint which depends upon a manila paper gasket and red lead for a tight fit.

Kewanee Radiators

Section Through Hubs

We show here two cross-sections of Kewanee Three-Column Radiators, the one through the hub and the other through the middle of the loop.

The section through the hub shows the slip-nipple joint, making a perfect iron-to-iron joint with absolutely no chance for leaking through loosely fitted threads.

The other section shows the concave columns and the distribution of surface. Note that the center column is much smaller than the outside columns, which is the means of exposing an unusually large part of the radiator surface to the cool air of the room in which the radiator is located, giving it the maximum of efficiency.

When specially ordered, we will furnish solid high legs, six or eight inches high. These extra height legs are built on the single-, two-, three-, and four-column radiators, except those 45 inches high.

We can furnish also, when desired, radiator pedestals of any height.

Section Through Center
